

ESD FLOORING

ELECTROSTATIC DISCHARGE IS A PROBLEM THAT YOU CAN'T IGNORE

The scuff of a shoe, the scrape of a chair creates an electron imbalance and, although the resulting discharge may be so small that the human body can't feel it, it can nevertheless have serious consequences.

In electronics manufacturing, in healthcare, pharmaceuticals, ordnance manufacture and storage, ESD incidents can often cause material, component or system failures, which may prove costly and perhaps even dangerous.

A COMPREHENSIVE COLLECTION ENGINEERED TO CONTROL ELECTROSTATIC DISCHARGE

The Polyflor ESD collection is designed to minimize or eliminate the risk of Electro Static Discharge (ESD) and has been specifically engineered to combat this problem at source, by facilitating a uniform flow of static electricity directly to a ground point. Problem solved.

The collection covers all major applications, combining the hard wearing, decorative qualities that Polyflor is renowned for with the benefits of static control properties.

Conductive ROF

CONDUCTIVE **ROF**

FEATURES

- ▶ Homogeneous in construction, to ensure that these properties are present throughout the product, guaranteeing a consistent and effective appearance and performance
- ▶ Excellent abrasion and chemical resistance
- ▶ Weld to create a completely impervious floor, offering no sanctuary to dirt and bacteria
- ▶ The closed surface and high vinyl content is easy and economical to maintain, ensuring the floor will go on looking good and performing well for years. **A long-term solution to the ESD problem**
- ▶ Polyflor-approved conductive polishes may be used, in accordance with the manufacturers' instructions. **Standard polishes should not be applied**
- ▶ Polyflor ESD products can be used in conjunction with static control clothing & footwear, wrist & heel straps; special work stations, dissipative packaging & sealing, ionisers & humidity controllers
- ▶ Available formats - sheet 2m x 20m rolls or 608 x 608mm* tiles particularly useful for use on access flooring

SPECIFYING THE CORRECT PRODUCT

The Polyflor ESD family of vinyl floor coverings is designed to meet specific electro static resistance requirements and is categorized to ensure that the same terminology is used by all parties (EN14041). The correct Polyflor ESD product can be identified by taking in to account both the electrical performance and the method of installation.

An electrical performance specification must be identified at the outset. This will not only stipulate the maximum and minimum electrical resistance requirements of the installed floor, but will also identify the method of test, the electrodes to be used, the method of measurement and the testing environment.

INSTALLATION & FLOORCARE

CONDUCTIVE ADHESIVES

Polyflor recommends the use of Polyflor conductive adhesive for all Static Control floor coverings and Polyflor conductive adhesive for earthing strips.

If alternative adhesives are used, they must be recommended by the adhesive manufacturer and approved by Polyflor.

FLOORCARE

In order to ensure the ESD features work effectively, the maintenance instructions produced by Polyflor should be followed. These are available at <https://www.polyflor.com/technical>.

Normal, commercially available polishes should not be applied to Polyflor ESD products, as they will inhibit the conductive properties. Conductive polishes which are approved by Polyflor can be applied in strict accordance with the manufacturer's instructions.

All Polyflor ESD sheet vinyl ranges provide a continuous, impervious and hygienic flooring solution which can be confidently cleaned in accordance with recommended maintenance procedures and approved maintenance products. The implementation of an effective cleaning regime is the most important defence against infection.

ENVIRONMENTALLY PREFERABLE FLOORING

Polyflor is an ISO 9001 and ISO 14001 certified company. Our ESD products have low VOC emissions and will not contribute to negative indoor air quality. They contain up to 72% natural materials, they feature 25% recycled content and are 100% recyclable. BRE Generic A+ and A ratings are awarded for Health and Commercial applications respectively.

ESD COLLECTION OVERVIEW

SD

Polyflor Static Dissipative products are engineered for use where static control is required, but the resistance level of the floor does not need to be as low as that provided by a conductive flooring.

These floor coverings are ideal for use in telecommunications installations, computer rooms, electronic manufacturing and healthcare facilities, such as scanner rooms, X-ray suites and operating theatres.

The SD range comprises: Palettone SD, in 6 non-directional colourways, Finesse SD, in 5 non-directional colourways, and Polyflor SD, in 6 shades with a marbleised design.

EC

Polyflor Electrostatic Conductive products have been engineered to meet the latest international standards for ESD protection floor coverings.

Where the floor system including the footwear is the primary means of grounding personnel, the resistance of the combination is recommended in IEC 61340-5-1 as being between 7.5×10^5 and 3.5×10^7 ohms. Polyflor EC and OHMega EC in combination with ESD control footwear meets this requirement when tested to IEC 61340-4-5.

Recommended applications include electronics manufacturing (wafer fabrication, product assembly, inspection and storage), laboratories and cleanrooms, also healthcare facilities including operating theatres, anaesthetising areas, intensive-care units and radiology departments.

ROF

Polyflor Conductive ROF has been specifically engineered for use in ordnance factories, in manufacturing areas where explosives and flammable agents are stored. It does not provide protection from a short circuit on a 240/250 volt mains, so installation and switching in these rooms are critical, and must be considered prior to any handover.

TESTING SERVICE

Whenever specifying a Polyflor ESD vinyl floor covering, Polyflor strongly recommends discussing your requirements with the Customer Technical Services Department. They will advise on which products are best suited for the particular application, and where no specification has been identified, will advise on the specifications used in similar installations and industries.

To ensure the whole installation meets the specification requirements Polyflor also offers a fee based, finished installation testing service.
